

Custom DIGINT Data Fine-Tuned to Your Mission Needs

Your analysts manage a patchwork of vendor platforms, APIs, and data formats, spending more time fixing pipelines than producing intelligence. Orbis Pulse delivers unified, curated DIGINT data through a single API, so your team focuses on analysis, not engineering.

Eliminate the Engineering Gap

Orbis Pulse handles the data engineering your team doesn't have capacity for. We ingest, normalize, and enrich data from across the DIGINT vendor landscape and deliver a single, schema-enforced dataset to your existing storage. When vendors change their formats, we absorb the break. Your feed stays clean.

One Contract. One Feed. Zero Technical Debt.

Instead of managing dozens of vendor contracts and hiring dedicated pipeline engineers, Pulse customers work through a single interface with Orbis. We manage all API subscriptions, data unification, and vendor relationships behind the scenes. Sources can be swapped without triggering new procurement cycles.

✔ Mission-Critical DIGINT Coverage

Gain access to an extensive network of over 140 DIGINT data providers, including API-based news feeds, cybersecurity intelligence, and disinformation analysis.

✔ Single API, Unified Schema

Pulse normalizes data from multiple vendors into a single, consistent format and delivers it directly to your existing storage. No duplicate pipelines. No broken dashboards.

✔ Adaptive and Scalable

Adjust data sources dynamically based on evolving needs without the procurement delays of traditional contracts. Go from zero to operational data flow in days, not months.

✔ Actionable Intelligence at Scale

Whether enriching proprietary datasets or supplementing existing operations, Pulse ensures you have the most relevant, up-to-date intelligence - clean, structured, and ready for analysis.
